

PHASE 6 – PROJECT TESTING

1. INTRODUCTION

The Project Testing phase is used to verify whether the configured ACLs work according to the project requirements.

Testing is performed by using different users, roles, and Branch values in the **Institution Details** table.

2. TESTING OBJECTIVES

The main objectives are:

- Verify the Read ACL.
- Verify Branch-based record restriction.
- Verify Create permission.
- Verify Write permission.
- Verify Delete permission.
- Verify unauthorized access is restricted.
- Verify administrator access.

3. TEST CASES

Test Case	User/Role	Action	Expected Result
TC01	bb1	Open records	Permitted EEE records are accessible
TC02	No required role	Open records	Access is restricted
TC03	bb1 + bb2	Create record	New record can be created
TC04	bb1 + bb2 + bb3	Edit record	Record can be modified
TC05	bb1 + bb2 + bb3 + bb4	Delete record	Record can be deleted
TC06	Administrator	Open records	Full access is available

4. READ ACL TESTING

The EEE test user is impersonated and the Institution Details list is opened.

Records containing different Branch values are checked.

Expected Result

The configured Read ACL should allow access according to the **Branch = EEE** condition and the user's required role.

A user without the required authorization should not be able to access the protected records.

5. CREATE ACL TESTING

A user with the required bb2 role is tested.

The **New** option is checked in the Institution Details table.

Expected Result

The user should be able to create a new record when the required ACL permissions are satisfied.

6. WRITE ACL TESTING

A user with the required bb3 role is tested by opening an existing permitted record and attempting to modify it.

Expected Result

The user should be able to edit the record when the required Read and Write permissions are satisfied.

7. DELETE ACL TESTING

A user with the required bb4 role is tested by selecting an authorized record and attempting to delete it.

Expected Result

The record should be deleted when the required Delete permission is satisfied.

8. ADMINISTRATOR TESTING

The administrator account is used to access the Institution Details table.

Records from different branches are checked.

Expected Result

The administrator should retain full access according to the project requirement.

9. TEST RESULT TABLE

The actual results can be recorded after implementation:

Test Case	Expected Result	Actual Result	Status
TC01	EEE records accessible	EEE User accessed the EEE record successfully	Pass
TC02	Unauthorized access restricted	User without required role received a security constraint message	Pass
TC03	Create permitted	New button was available and record creation was permitted	Pass
TC04	Write permitted	Update button was available and record was editable	Pass
TC05	Delete permitted	EEE record was deleted successfully	Pass
TC06	Admin has full access	Administrator viewed records from ECE, EEE, and CSE branches	Pass

10. SCREENSHOTS

FIGURE 6.1 EEE user access.

FIGURE 6.2 Restricted user access.

FIGURE 6.3 Create operation.

The screenshot shows the 'Institution Details' form in ServiceNow. The header includes the ServiceNow logo and navigation links: All, Favorites, History, Process Mining Workspace. The breadcrumb trail is 'Institution Details - Created 2026-09-23 07:55:03'. The form contains several input fields: 'Student Name' (Alejandra Pienatt), 'Faculty Name' (Abraham Lincoln), 'Student Roll Number' (IN0002), and 'Branch' (EEE). There are also fields for 'Description', 'Phone Number', and 'Email'. A 'Lookup using list' button is visible above the 'Student Name' field. At the bottom left of the form, there are 'Update' and 'Delete' buttons.

FIGURE 6.4 Write operation.

The screenshot shows the 'Institution Details' list view in ServiceNow. The header includes the ServiceNow logo and navigation links: All, Favorites, History, Process Mining Workspace. The breadcrumb trail is 'Institution Details'. The table has columns: Branch, Description, Email, Faculty Name, Phone Number, Student Name, and Student Roll Number. The table is currently empty, and a message 'No records to display' is shown below the table. A 'New' button is visible in the top right corner.

Branch	Description	Email	Faculty Name	Phone Number	Student Name	Student Roll Number
No records to display						

FIGURE 6.5 Delete operation.

The screenshot shows the ServiceNow 'Institution Details' page. At the top, there is a navigation bar with 'servicenow' logo and tabs for 'All', 'Favorites', 'History', 'Workspaces', and 'Admin'. A search bar is present on the right. Below the navigation bar, there is a sub-header 'Institution Details' with a 'Branch' dropdown and a search field. The main content area displays a table with the following data:

Branch	Description	Email	Faculty Name	Phone Number	Student Name	Student Roll Number
CSE			Abraham Lincoln		Adela Cervantsz	IN0003
EEE			Abel Tuter		Adela Cervantsz	
(empty)			(empty)		(empty)	
ECE			Abel Tuter		Adela Cervantsz	IN00001

At the bottom of the table, there is a pagination bar showing '1 to 4 of 4'.

FIGURE 6.6 Administrator access.

These screenshots provide evidence that the ACL configuration has been tested.

11. TESTING OUTCOME

The testing phase verifies whether the configured roles and ACLs provide the intended level of access.

Any failed test case should be investigated by checking the user's roles, ACL conditions, scripts, and applicable ServiceNow security rules.

Once all required test cases produce the expected results, the project can proceed to the **Project Documentation** phase.
